## **World experts “get down and dirty” at the OTEK SRR Conference 2010 – An International Learning Experience**

The OTEK **Sustainable Risk Rationalization (SRR) Conference – An International Learning Experience** has successfully developed over the past three years as a unique event providing a practical hands on approach to reducing risks created by the redevelopment of Brownfield or, more commonly named, polluted sites.

The OTEK SRR Conference 2010 focuses on realities, not theories.

Delegates will hear from twenty nine leading experts in their field drawn from Australia, China and the USA. This includes Terry Tamminen, the man who made Arnie Schwarzenegger change his environmental ways and his gas guzzling Hummers, and one of China’s environmental protection experts, Sun Yichao along with the former BP Global Technical Assurance Manager for Remediation Management, Ric Scofield to name just a few who will present perspectives from around the globe.

There is a major stream on legal risks that includes presentations from Partners of leading environmental law firms Blake Dawson (Australia), Goodwin Proctor (USA), Holland & Knight (USA) and Baker & McKenzie (China) as well as a truly International financial and governmental perspective on the environmental issues surrounding Brownfield developments.

The conference is being held in Melbourne on 2/3 Sept and more information and online registration can be found at the conference web site at [www.srr-otek.com.au](http://www.srr-otek.com.au).
